

Mastering space and time

With CIDAN **MANUAL DECOILER SYSTEM** you can easily handle coils with weights up to 2000 kg. You decide how many coil stations you want, starting from 2 up to 8 and all coils will always be perfectly aligned to the cut-to-length machine. By supplementing our floor-mounted decoiler with a top-mounted decoiler, you create a **DECOILER TOWER** and double the coil capacity on the same floor space. Thanks to the cantilever design, coils are easily loaded with a crane or a forklift, minimizing the risk of damaging the

material and ensures quick coil changes. Each decoiler is equipped with an expandable mandrel and with a manually adjustable brake, eliminating the risk of pressure marks and ensures a smoother decoiling. The guide rollers are adaptable in height, supports the sheet and create distance so that you avoid contact between different materials.

To utilize the **DECOILER SYSTEM** even better, combine it with our manual **COIL SELECTOR** which will keep up to 8 different materials on standby. By locking all materials in the **COIL SELECTOR**, you always have direct access to all coils in the **DECOILER SYSTEM**. The change from one material to the next is very fast and the risk of damage to the material is minimized. With a **DECOILER SYSTEM** and a **COIL SELECTOR**, you get a highly efficient supply for your cut-to-length machine.

The most important advantages:

- ✓ Creates order in the workshop.
- ✓ Fast and easy access to several different material types.
- ✓ Quick, simple and secure coil changes.
- ✓ Utilizes the floor space efficiently.
- ✓ Adaptable for your demands.
- ✓ Minimizes damage to the material.
- ✓ Controlled decoiling.
- ✓ Clear overview of available material.

The **guide rollers** are adaptable in height, separating the sheet layers in order to protect the material surfaces.

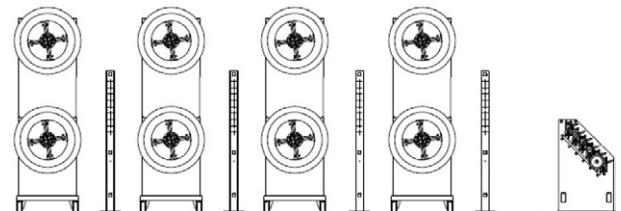

Always ready with a **COIL SELECTOR**.

The COIL SELECTOR is a cost effective solution for fast and simplified manual coil changes. With up to 8 preset materials you can feed your cut-to-length machine in no time.

An exquisite accessory for our manual 2-tons decoilers. A larger **hand wheel** (option) attached to the back of the decoiler that facilitates rewinding of sheet metal. Easily movable between the decoilers.

Save space in the workshop.

Example of fully assembled combination with DECOILER TOWERS and COIL SELECTOR, everything fits in less than 9 meters. Why not start with one tower and expand when the need increases?

	Coil weight	Coil width	Coil diameter		Coil places	Outer dimensions		
	kg	mm	Inner mm	Outer mm	number	Length* mm	Width** mm	Height mm
DO 2 COIL TOWER	2 x 2000	1250	360-520	850	2	1550	2200	2700
2 x DO 2 COIL TOWER	4 x 2000	1250	360-520	850	4	3100	2200	2700
3 x DO 2 COIL TOWER	6 x 2000	1250	360-520	850	6	4650	2200	2700
4 x DO 2 COIL TOWER	8 x 2000	1250	360-520	850	8	6200	2200	2700

*without coil selector **without safety
